

CLOUD COMPUTING

Cloud Computing

Business communications across the world are revolving around Analytics, Cloud, Mobility, and Social. The cloud encompasses the power to transform businesses by prompting agile business platforms, accelerating digital innovation, and minimizing time-to-market. In other words, the cloud has become the corner stone for global enterprises.

Just wishing to embrace the power of cloud is not sufficient as the cloud journey demands tackling today's realities; with cloud solutions designed at our Innovation Labs, you are covered.

With motivitylabs you can have complete control over spanning multiple clouds. Our next generation solutions are designed to support various workload environments as well as different application types.

Motivitylabs welcomes you to explore the potential of the cloud technology and re-imagine your cloud planning.

Get the motivitylabs Advantage

Cloud services designed at our Innovation Labs empower corporate leaders as well as employees to conduct their operations in more meaningful and productive way. Our solutions assist our clients to:

- Provide their workforce with an anytime, anywhere, any device experience
- Accurately scale, manage, optimize and outsource their IT resources
- Transform to a dynamic growth engine by truly becoming an agile enterprise
- Minimize up-front investments and take complete control over costs

Our technology experts mixed with motivitylab's in-depth expertise provide true multidirectional dynamism to deliver a seamless cloud journey.

Experience True Innovation with Our Multi-Cloud Services

Cloud Advisory Services

Organizations are concentrating their energy on achieving competitive advantage through innovative business models, process agility, and collaboration, at low costs. With the right direction, appropriate cloud solutions have the power to provide such flexibility to seize innovative

Cloud Computing

business opportunities. Organizations are required to identify and develop an efficient cloud strategy that can fulfill their business goals.

Corporate leaders are aiming to balance their cloud vision in strategic manner with managing practical challenges including fiscal economy, functionality, and security. Cloud advisory services of motivitylabs are aimed at:

- Deciding important things to migrate to cloud by setting priority on infrastructure, applications, and processes.
- Determining ideal ways for cloud migration by developing an efficient migration strategy.
- Determining an apt cloud type to migrate to by implementing an ideal mix of Public, Private or Hybrid Clouds

Application Development Platforms

Our cloud application management will allow you to feel the power of the cloud at your fingertips.

Develop your application fast, pivot in no time, and improve often. Development platforms created by motivitylabs abstract the physical attributes and mix it with the virtual attributes; they assist you in spanning your cloud-enabled applications to cloud-native applications.

Prime Features:

- Scalable and simplified deployment
- Familiar and fast development
- Truly optimized performance

Outstanding Cloud Analytics

In order to optimize your wide-spread data, you need outstanding cloud analytics. Our analytics solutions enable you to seize every opportunity that you can derive from data insight. Take full advantage of the connections in your widely-distributed network to extract valuable insights and take real-time action.

Cloud Computing

Prime Features:

- Combine highly distributed operations
- Bring analytics to your enterprise data
- Empower staff with real-time data access

Automated Infrastructure

Automated infrastructure allows you to become nimble, and scale new levels of efficiency and speed to IT. Also it infuses the required control to improve enterprise agility.

Prime Features:

- Simplify your cloud automation
- Get control, visibility and automation
- Ease the cloud migration process

Cloud Application Migration

Organizations are experiencing a thriving need to shift their applications and infrastructure to cloud for cost-efficiency and responsiveness. Modernizing data center architectures and application platforms has become an imperative requirement in order to support multi-geography projects and unpredictable business demands.

Extract values you need from the cloud with motivitylabs. Our cloud expertise will assist you to:

- Discard the siloed approach within your organization to cloud migration
- Determine applications that are apt to move to cloud for different cloud types
- Prevent duplication of efforts and resource utilization with respect to cloud migration

Cloud Computing

Cloud Integration

The increasing heterogeneity of organizational application portfolio is thankful to the adoption of modern technologies and unprecedented growth scale of organizational. Organizations are realizing that such increasing heterogeneity is leading to greater integration complexity and information silos. For seamless business operations, organizations need the ecosystem of interconnected business application. Secure and smooth data flow enhances customer satisfaction, optimizes business processes, and blurs organizations silos.

It is not wise for organizations to ignore the criticality of the complexities associated with application integration, especially cloud-based applications. Such complexities often extend beyond organization boundaries and they are no small challenge to overcome. Our innovate on oriented cloud integration solutions empower you to form a mature strategy to overcome:

- Interface limitations as well as application connectivity
- Performance and latency related challenges
- Cost issues linked with data flow volume

Cloud Security Services

Don't settle for anything less than a comprehensive security. Get piece of mind you deserve with security solutions spanning the cloud, data center, and to the edge.

Our solutions aim at providing consistent security where applications and services are deployed, and also beyond the limits of multi-cloud environments.

Prime Features:

- Optimum control and visibility across multiple cloud platforms
- Highly secure cloud for your peace of mind
- Pre-attack as well as post-attack security assurance
